

# OVARIAN CANCER SIGNS AND SYMPTOMS

## Signs to look out for:

- Vague abdominal pain or pressure
- Feeling of abdominal fullness, gas, nausea, indigestion - different to your normal sensations
- Sudden abdominal swelling, weight gain or bloating
- Persistent changes in bowel or bladder patterns
- Low backache or cramps
- Abnormal vaginal bleeding
- Unexplained weight loss

Ovarian cancer signs and symptoms can be vague, or can often be misdiagnosed as common female complaints. If you have one or two of the listed symptoms, you most likely do not have ovarian cancer. That said, a greater combination of symptoms, or symptoms which persist or are unusual for you, should be investigated by a medical professional.
